To Whom It May Concern,

I've been employed at SAST for just over 2 years as the shop foreman. During this time I've had the privilege of working with the EcoTec hydrogen units.

We have five 2008-2009 trucks running these units, 2 Cummins ISX 550's and 3 Caterpillar C15 550's. While the results of the hydrogen units vary slightly between motors, our average fuel economy increase is 20% and sometimes more. Fuel economy is just one of the benefits we've seen from the EcoTec units. Our drivers have reported increased power and reduced exhaust temperatures and oil test results have shown a reduction in soot levels.

The operation of these units is extremely simple to operate and very low maintenance. They seem to be of very rugged design, with no problems operating in extreme temperatures.

Having the experience I have with these EcoTec Hydrogen Generators, I can say with confidence that I highly recommend them for anyone looking for increased economy and performance.

Sincerely,  
Justin Barlow

Maintenance Dept. Foreman
